

Bitcoin vs Bitcoinayt: 8-Year Price Predictions

By David Gomadza | www.twofuture.world | bitcoinayt.com

Overview

This interactive comparison explores the differences between Bitcoin (BTC) and Bitcoinayt (BTCYT), based on David Gomadza's predictions and whitepaper. Bitcoinayt is presented as an upgrade to Bitcoin with unique features tied to lifespan extension and a radically different economic model.

Key Differences

Bitcoin (BTC)

- Fixed supply: 21 million coins
- Halving every 4 years
- Current market cap: ~\$1.5T (2025)

Bitcoinayt (BTCYT)

- Fixed supply: 9.1 million coins
- Annual halving schedule
- Target market cap: 10^{17} by 2030

- Proven store of value
- Decentralized, no central authority
- Thrives on economic uncertainty
- Established network (15+ years)
- Mining reward: 3.125 BTC/block (post-2024)

- Tied to lifespan extension (10,000+ years)
- Backed by Tomorrow's World Order
- Uses "bitrate" and "longago" metrics
- Initial reward: 89.37 BTCYT/block
- Aims to remove economic fears

8-Year Price Predictions

2025

BTC: \$100K-\$120K

BTCYT: \$1K-\$10K

2026

BTC: \$200K-\$280K

BTCYT: \$5K-\$50K

2027

BTC: <\$280K

BTCYT: \$20K-\$150K

2028

BTC: \$328K-\$390K

2029

BTC: \$340K

2030

BTC: \$370K

BTCYT: \$50K-\$300K**BTCYT: \$100K-\$600K****BTCYT: \$200K-\$1M****2031****BTC: \$390K****BTCYT: \$250K-\$1.2M****2032-2033****BTC: \$400K-\$520K****BTCYT: \$200K-\$1.5M**

Bitcoinayt's Unique Value Propositions

Revolutionary Features

- Linked to extended human lifespan (10,000+ years)
- Uses "bitrate" metric (creator's: 768902867890386 vs others: 38)
- Incorporates "longago" infinite sequence concept
- Backed by Tomorrow's World Order organization
- Aims to become global currency of one-world government

- Designed to remove economic fears (death, bankruptcy, job loss)
- Potential to redirect \$26T/year from traditional systems

Impact of Extended Lifespan on Economics

Bitcoinayt's foundation is the claim that human lifespan can be extended to thousands or millions of years, which would fundamentally reshape economic systems:

Traditional Economics

- Life insurance premiums: ~\$3T/year
- Healthcare spending: ~\$10T/year
- Mortgage debt: ~\$100T with \$5T annual payments
- Pension spending: ~\$5T/year
- Tax revenue: ~\$30T/year
- Loan interest: ~\$3T/year

With Extended Lifespan

- Life insurance becomes obsolete
- Healthcare focuses on maintenance not acute care
- Mortgages spread over centuries at lower rates
- Pensions unnecessary with perpetual work ability
- Taxes reduced with longer working lives
- Loan fees drop with century-long repayment terms

According to the document, these changes could free up approximately \$26T annually that could be redirected to Bitcoinayt, potentially driving its value to unprecedented levels.

Market Cap Comparison

Bitcoinayt's target of 10^{17} by 2030 compared to Bitcoin's projected growth:

Linear Scale

Logarithmic Scale

The 10^{17} target would represent 66,000x Bitcoin's current market cap, requiring unprecedented adoption levels.

Conclusion

Bitcoinayt presents a radically different vision for cryptocurrency, tied to human lifespan extension and backed by an ambitious one-world government concept. While Bitcoin is predicted to see steady growth to \$400K-\$650K by 2033, Bitcoinayt aims for a meteoric rise to \$1M+ per coin based on its unique value propositions.

The document suggests that Bitcoinayt could potentially "starve out" Bitcoin by removing the economic fears that currently drive Bitcoin's value, though this depends on the actual implementation of lifespan extension technology and global adoption of the Tomorrow's World Order framework.
